Some will reach 5GHz while others won't make it to 4.7Hz; this is an inevitable and random part of overclocking. However, in our experience the vast majority of chips should be able to comfortably reach 4.7GHz using the Maximus V Formula and appropriate cooling we're using here. Switch BIOS to Advanced Mode; Set AI overclock tuner to Manual

Overclocking Guide: 4.7GHz Core-i7 3770K On The Maximus V ...

To calculate the actual time period denoted by the number of clock cycles set for CAS we can use the following formula: t_{CAS} in Nano seconds = $(CAS * 2000) / \text{Memory Frequency}$ This same formula can be applied to all memory timings that are set in DRAM clock cycles. DRAM RAS TO CAS Latency: Also known as t_{RCD} .
