## Cities, Networks, and Global Environmental Governance ...

Hierarchical analysis of 256 cities in 118 countries suggests that the degree of cities' globalization, or their level of "global cityness," is positively associated with the cities' membership in the global networks. The level of individual cities' integration into the international economy and transportation grid is crucial for sharing ideas of global environmental responsibility.

As a result of global dynamics—the increasing interconnection of people and places—innovations in global environmental governance have altered the role of cities in shaping the future of the planet. This book is a timely study of the importance of these social transformations in our increasingly global and increasingly urban world. Through analysis of transnational municipal networks, such as Metropolis and the C40 Cities Climate Leadership Group, Sofie Bouteligier's innovative study examines theories of the network society and global cities from a global ecology perspective. Through direct observation and interviews and using two types of city networks that have been treated separately in the literature, she discovers the structure and logic pertaining to office networks of environmental non-governmental organizations and environmental consultancy firms. In doing so she incisively demonstrates the ways in which cities fulfill the role of strategic sites of global environmental governance, concentrating knowledge, infrastructure, and institutions vital to the function of transnational actors.

C40 Cities Climate Leadership Group, Sofie Bouteligier's innovative study examines theories of the network society and global cities from a global ecology perspective. Through direct observation and interviews and using two types of city networks that have been treated separately in the literature, she discovers the structure and logic pertaining to office networks of environmental non-governmental organizations and environmental consultancy firms. In doing so she incisively demonstrates the ways in which cities fulfill the role of strategic sites of global environmental governance, concentrating knowledge, infrastructure, and institutions vital to the function of transnational actors.

Cities have led the way to combat climate change by planning and implementing climate mitigation and adaptation policies. These local efforts go beyond national boundaries. Cities are forming transnational networks to enhance their understandings and practices for climate policies. In contrast to national governments that have numerous obstacles to cope with global climate change in the international and national level, cities have become significant international actors in the field of international relations and environmental governance. *Global Cities and Climate Change* examines the translocal relations of cities that have made an international effort to collectively tackle climate change. Compared to state-centric terms, international or trans-national relations, trans-local relations look at policies, politics, and interactions of local governments in the globalized world. Using multi-methods such as multi-level analysis, comparative case studies, regression analysis and network analysis, Taedong Lee illustrates why some cities participated in transnational climate networks for cities; under what conditions cities internationally cooperate with other cities, with which cities; and which factors influence climate policy performance. An

# Acces PDF Cities Networks And Global Environmental Governance

essential read to all those who wish to understand the driving factors for local governments' engagement in global climate governance from a theoretical as well as practical point of view. Lee makes a valuable contribution to the fields of international relations, environmental policies, and urban studies.

It argues that the formation and implementation of local climate change policy has been limited by the resources and powers of local government, and by conflicts between economic and environmental objectives.

Case study rich, this volume advances our understanding of the significance of 'the city' in global governance. The editors call for innovation in international relations theory with case studies that add breadth to theorizing the role sub-national political actors play in global affairs. Each of the eight case studies demonstrates different intersections between the local and the global and how these intersections alter the conditions resulting from globalization processes. The case studies do so by focusing on one of three sub-themes: the diverse ways in which cities and sub-national regions impact nation-state foreign policy; the various dimensions of urban imbrications in global environmental politics; or the multiple methods and standards used to measure the global roles of cities.

An overview of the forms of agency in urban climate politics, including their strengths, limitations and the power dynamics between them. Written by renowned scholars from around the globe, it is ideal for researchers and practitioners working in the area of urban climate politics and governance.

Cities are no longer just places to live in. They are significant

# Acces PDF Cities Networks And Global Environmental Governance

actors on the global stage, and nowhere is this trend more prominent than in the world of transnational climate change governance (TCCG). Through transnational networks that form links between cities, states, international organizations, corporations, and civil society, cities are developing and implementing norms, practices, and voluntary standards across national boundaries. In introducing cities as transnational lawmakers, Jolene Lin provides an exciting new perspective on climate change law and policy, offering novel insights about the reconfiguration of the state and the nature of international lawmaking as the involvement of cities in TCCG blurs the public/private divide and the traditional strictures of 'domestic' versus 'international'. This illuminating book should be read by anyone interested in understanding how cities - in many cases, more than the countries in which they're located - are addressing the causes and consequences of climate change.

Drawing upon a variety of empirical and theoretical perspectives, *The Urban Climate Challenge* provides a hands-on perspective about the political and technical challenges now facing cities and transnational urban networks in the global climate regime. Bringing together experts working in the fields of global environmental governance, urban sustainability and climate change, this volume explores the ways in which cities, transnational urban networks and global policy institutions are repositioning themselves in relation to this changing global policy environment. Focusing on both Northern and Southern experience across the globe, three questions that have strong bearing on the ways in which we understand and assess the changing relationship between cities and global climate system are examined. How are cities repositioning themselves in relation to the global climate regime? How are cities being repositioned – conceptually and

# Acces PDF Cities Networks And Global Environmental Governance

epistemologically? What are the prospects for crafting policies that can reduce the urban carbon footprint while at the same time building resilience to future climate change? The Urban Climate Challenge will be of interest to scholars of urban climate policy, global environmental governance and climate change. It will be of interest to readers more generally interested in the ways in which cities are now addressing the inter-related challenges of sustainable urban growth and global climate change. Chapter 9 and Chapter 11 of this book is freely available as a downloadable Open Access PDF at [www.tandfebooks.com/openaccess](http://www.tandfebooks.com/openaccess). It has been made available under a Creative Commons Attribution-Non Commercial-No Derivatives 3.0 license.

Cities are playing an ever more important role in the mitigation and adaption to climate change. This book examines the politics shaping whether, how and to what extent cities engage in global climate governance. By studying the C40 Cities Climate Leadership Group, and drawing on scholarship from international relations, social movements, global governance and field theory, the book introduces a theory of global urban governance fields. This theory links observed increases in city engagement and coordination to the convergence of C40 cities around particular ways of understanding and enforcing climate governance. The collective capacity of cities to produce effective and socially equitable global climate governance is also analysed. Highlighting the constraints facing city networks and the potential pitfalls associated with a city-driven global response, this assessment of the transformative potential of cities will be of great interest to researchers, graduate students and policymakers in global environmental politics and policy.

# Acces PDF Cities Networks And Global Environmental Governance

There is now a palpable sense of optimism about the role of cities and transnational city-networks in global climate governance. Yet, amidst the euphoria, there is also a sense that the power that has been ascribed to – and frequently assumed by – cities has been overstated; that the power of cities and city-networks to make a difference in global climate politics is not what it appears. This book explores the implications of city-engagement in global climate politics, outlining a theoretical framework that can be used to understand the power of cities in relation to transnational city-networks, multinational corporations and nation-states. The book will be of interest to students and scholars of transnational governance, global environmental politics and climate change.
