Cascading Style Sheets solve a common problem with HTML which was originally designed to define the content of a document, but not the document presentation/layout. The layout of the document was supposed to be taken care of by the browser, without using any formatting tags.

CSS (Cascading Style Sheets) for Beginners
Formal syntax auto | fixed Examples Fixed-width tables with text-overflow. This example uses a fixed table layout, combined with the width property, to restrict the table's width. The text-overflow property is used to apply an ellipsis to words that are too long to fit. If the table layout were auto, the table would grow to accommodate its contents, despite the specified width.

table-layout - CSS: Cascading Style Sheets | MDN
If what you want is a layout where items line up in rows and columns then you should choose CSS Grid Layout. Grid Layout works on the direct children of the grid container in a similar way to the manner in which flexbox works on the direct children of the flex container, however with CSS Grid you can line your items up in rows and columns — it is described as two-dimensional.

Column layouts - CSS: Cascading Style Sheets | MDN
Cascading Style Sheets, or CSS, is the new way to design a website. Dreamweaver makes using CSS easy for formatting the content and web elements of a page. CSS is just a style sheet that holds a group of style rules (a set of formatting properties that you can apply to different elements of your web page). You can organize the format of web elements like text, images, lists, hyperlinks, and even your page layout using style sheets and style rules for your web pages.

Use of Cascading Style Sheets (CSS) in Web Design - UPLARN
There truly is no right or wrong way to create Cascading Style Sheets (CSS) for your JavaScript applications, but using an organized approach can make the task go more quickly and produce better results with fewer errors.

How to Create Cascading Style Sheets (CSS) Simply and ...
Cascading Style Sheets (CSS) are the most flexible way to create attractive, standards-compliant websites. Even so, many web designers choose to stick to the original HTML elements that they are familiar with in order to implement their designs.

Cascading Style Sheets (CSS) Layouts Without Tables
Constraint Cascading Style Sheets (CCSS). The extension allows the designer to add arbitrary linear arithmetic con-straints to the style sheet to control features such as object placement, and finite-domain constraints to control features such as font properties. Constraints may be given a strength, reflecting their relative importance.

Constraint Cascading Style Sheets for the Web
Before learning how to secure cascading style sheets, let us first explore what are the threats that would cause through cascading stylesheets. Threat 1: Let us assume that we are using embedded/internal CSS in our code and you are allowing a user some CSS customization, then there is a chance that the attacker could inject a JavaScript code by closing the style tag in the customizable ...

How to secure cascading style sheets ? - GeeksforGeeks
Cascading Style Sheets (CSS) is used to format the layout of a webpage. With CSS, you can control the color, font, the size of text, the spacing between elements, how elements are positioned and laid out, what background images or background colors are to be used, different displays for different devices and screen sizes, and much more!

HTML Styles - CSS
Cascading Style Sheets (CSS) is a style sheet language used for describing the presentation of a document written in a markup language such as HTML. CSS is a cornerstone technology of the World Wide Web, alongside HTML and JavaScript. CSS is designed to enable the separation of presentation and content, including layout, colors, and fonts.

CSS - Wikipedia
Cascading Style Sheets (CSS) provide easy and effective alternatives to specify various attributes for the HTML tags. Using CSS, you can specify a number of style properties for a given HTML element. Each property has a name and a value, separated by a colon (:). Each property declaration is separated by a semi-colon (;).

HTML - Style Sheet - Tutorialspoint
You need only outline the changes. The word cascade in Cascading Style Sheets means your styles are passed along (inherited) by style sheets that get their instructions from your original preferences — in this case, those you set up in the class. Basically, when you set up a style, any element that gets assigned that style " cascades through " to the other styles, as directed by your settings, unless you apply a change.

How Cascading Style Sheets (CSS) Work - dummies
