Physical properties of rocks : fundamentals and principles ...

Rocks ordinarily lie everywhere on the ground of the Earth. They constitute most of the landforms, as we often notice. For instance, rocks make up the mountains and most of the non-water portions of the earth's surface. A rock is hence defined as a solid naturally occurring mass of consolidated mineral matter.

4th Grade Earth Science: Rocks & Minerals Unit

What are the physical properties of minerals? Minerals are the building blocks of rocks, and therefore are the building blocks of our planet's structure. They are specifically defined as naturally occurring, crystalline (as used in mineralogy, this means that they have an ordered internal structure) solids that are made inorganically, not by biological methods.
