our understanding of the pathogenesis, natural history, and treatment of pulmonary alveolar proteinosis (PAP) has evolved considerably.

PAP is characterised by the accumulation of surfactant in alveolar macrophages and alveoli, resulting in impaired gas exchange.

ARTICLE Dyspnoea: Pathophysiology and a clinical approach

The pathophysiology of acute pulmonary embolism is the basis for risk stratification of patients as being at high, intermediate and low risk of adverse outcomes.

Where To Download

This risk stratification has been advocated to tailor clinical management according to the severity of pulmonary embolism. Anticoagulation is the mainstay of the treatment of acute pulmonary embolism.

[Anticoagulant treatment for acute pulmonary embolism: a ...](#)
