Ascent of Man

Your information has a life of its own, and it's using you to get what it wants. One of the most peculiar and possibly unique features of humans is the vast amount of information we carry outside our biological selves. But in our rush to build the infrastructure for the 20 quintillion bits we create every day, we've failed to ask exactly why we're expending ever-increasing amounts of energy, resources, and human effort to maintain all this data. Drawing on deep ideas and frontier thinking in evolutionary biology, computer science, information theory, and astrobiology, Caleb Scharf argues that information is, in a very real sense, alive. All the data we create--all of our emails, tweets, selfies, A.I.-generated text and funny cat videos--amounts to an aggregate lifeform. It has goals and needs. It can control our behavior and influence our well-being. And it's an organism that has evolved right alongside us. This symbiotic relationship with information offers a startling new lens for looking at the world. Data isn't just something we produce; it's the reason we exist. This powerful idea has the potential to upend the way we think about our technology, our role as humans, and the fundamental nature of life. The Ascent of Information offers a humbling vision of a universe built of and for information. Scharf explores how our relationship with data will affect our ongoing evolution as a species. Understanding this relationship will be crucial to preventing our data from becoming more of a burden than an asset, and to preserving the possibility of a human future.

Dr Jacob Bronowksi's The Ascent of Man traces the development of human society through our understanding of science. First published in 1973 to accompany the groundbreaking BBC television series, it is considered one of the first works of 'popular science', illuminating the historical and social context of scientific development for a generation of readers. In his highly accessible style, Dr Bronowski discusses human invention from the flint tool to geometry, agriculture to genetics, and from alchemy to the theory of relativity, showing how they all are expressions of our ability to understand and control nature. In this new paperback edition, The Ascent of Man inspires, influences and informs as profoundly as ever.

Charles Eisenstein explores the history and potential future of civilization, tracing the converging crises of our age to the illusion of the separate self. In this limited hardcover edition of Eisenstein's landmark book, he argues that our disconnection from one another and the natural world has mislaid the foundations of science, religion, money, technology, economics, medicine, and education as we know them. It has fired our near-pathological pursuit of technological Utopias even as we push ourselves and our planet to the brink of collapse. Fortunately, an Age of Reunion is emerging out of the birth pangs of an earth in crisis. Our journey of separation hasn't been a terrible mistake but an evolutionary process and an adventure in self-discovery. Even in our darkest hour, Eisenstein sees the possibility of a more beautiful world--not through the extension of millennia-old methods of management and control but by fundamentally reimagining ourselves and our systems. We must shift away from our Babelian efforts to build ever-higher towers to heaven and instead turn out attention to creating a new kind of civilization--one designed for beauty rather than height. Breathtaking in its scope and intelligence, The Ascent of Humanity is a landmark book showing what it truly means to be human. "A tour-de-force filled with astounding insight, wit, wisdom and heart." --Christopher Uhl, author of Developing Ecological Consciousness: Paths to a Sustainable Future "Quite marvelous, a hugely important work. This book is truly needed in this time of deepening crisis." --John Zerzan, author of Future Primitive and Elements of Refusal

The 10th anniversary edition, with new chapters on the crash, Chimerica, and cryptocurrency In this updated edition, Niall Ferguson brings his classic financial history of the world up to the present day, tackling the populist backlash that followed the 2008 crisis, the descent of "Chimerica" into a trade war, and the advent of cryptocurrencies, such as Bitcoin, with his signature clarity and expert lens. The Ascent of Money reveals finance as the backbone of history, casting a new light on familiar events: the Renaissance enabled by Italian foreign exchange dealers, the 2008 crisis traced from America's bankruptcy capital, Memphis, to China's boomtown, Chongqing. We may resent the plutocrats of Wall Street but, as Ferguson argues, the evolution of finance has rivaled the importance of any technological innovation in the rise of civilization. Indeed, to study the ascent and descent of money is to study the rise and fall of Western power itself.

This volume provides an overarching view of the early social and intellectual transformations that brought European civilization from its birth in antiquity to its rebirth during the Renaissance. --from publisher description

When and where did the ancestors of modern birds evolve? What enabled them to survive the meteoric impact that wiped out the dinosaurs? How did these early birds spread across the globe and give rise to the 10,600-plus species we recognise today ? from the largest ratites to the smallest hummingbirds? Based on the latest scientific discoveries and enriched by personal observations, The Ascent of Birds sets out to answer these fundamental questions. The Ascent of Birds is divided into self-contained chapters, or stories, that collectively encompass the evolution of modern birds from their origins in Gondwana, over 100 million years ago, to the present day. The stories are arranged in chronological order, from tinamous to tanagers, and describe the many dispersal and speciation events that underpin the world's 10,600-plus species. Although each chapter is spearheaded by a named bird and focuses on a specific evolutionary mechanism, the narrative will often explore the relevance of such events and processes to evolution in general. The book starts with The Tinamou's Story, which explains the presence of flightless birds in South America, Africa, and Australasia, and dispels the cherished role of continental drift as an explanation for their biogeography. It also introduces the concept of neoteny, an evolutionary trick that enabled dinosaurs to become birds and humans to conquer the planet. The Vegavis's Story explores the evidence for a Cretaceous origin of modern birds and why they were able to survive the asteroid collision that saw the demise not only of dinosaurs but of up to three-quarters of all species. The Duck's Story switches to sex: why have so few species retained the ancestral copulatory organ? Or, put another way, why do most birds exhibit the paradoxical phenomenon of penis loss, despite all species requiring internal fertilisation? The Hoatzin's Story reveals unexpected oceanic rafting from Africa to South America: a stranger-than-fiction means of dispersal that is now thought to account for the presence of other South American vertebrates, including geckos and monkeys. The latest theories underpinning speciation are also explored. The Manakin's Story, for example, reveals how South America's extraordinarily rich avifauna has been shaped by past geological, oceanographic and climatic changes, while The Storm-Petrel's Story examines how species can evolve from an ancestral population despite inhabiting the same geographical area. The thorny issue of what constitutes a species is discussed in The Albatross's Story, while The Penguin's Story explores the effects of environment on phenotype ? in the case of the Emperor penguin, the harshest on the planet. Recent genomic advances have given scientists novel approaches to explore the distant past and have revealed many unexpected journeys, including the unique overland dispersal of an early suboscine from Asia to South America (The Sapayoa's Story) and the blackbird's ancestral sweepstake dispersals across the Atlantic (The Thrush's Story). Additional vignettes update more familiar concepts that encourage speciation: sexual selection (The Bird-of-Paradise's Story); extended phenotypes (The Bowerbird's Story); hybridisation (The Sparrow's Story); and 'great speciators' (The White-eye's Story). Finally, the book explores the raft of recent publications that help explain the evolution of cognitive skills (The Crow's Story); plumage colouration (The Starling's Story); and birdsong (The Finch's Story)

The Ascent of Man develops a comprehensive theory of human nature. James F. Harris sees human nature as an emergent property that supervenes a cluster of properties. Despite significant overlap between individuals that have human nature and those that are biologically human, the concept of human nature developed in this book is different. Whether biologically human or not, an individual may be said to possess human nature. This theory of human nature is called the "cluster theory." Harris takes as his point of departure Plato's comment that in learning what a thing is we should look to the ways in which it acts upon or is acted upon by other things. He commits to a methodological naturalism and draws upon current views from the social and biological sciences. The cluster theory he develops represents one of the very few completely novel theories of human nature developed in the post-Darwin era. It will prove most useful in dealing with philosophical questions involving such contemporary issues as cloning, cybernetics, and the possibility of extraterrestrial life. The fundamental conceptual issue is how plastic and elastic is the nature of human nature. Just how different might we imagine human beings to be and still be human in the sense that they still possess whatever it is that accounts for a unique nature? The theory of human nature developed in this book is a descriptive, dynamic, bottom-up, non-essentialist, naturalist theory. Harris is well versed in classical philosophy and contemporary behavioral science. He writes in a graceful, open-ended way that both educates and illuminates renewed interest in what it means to be human.
